

Benefits

- **Quiet Performance:** EC fan runs at low speed for most of the heating season. Increases to high speed automatically based on demand.
- **Ultimate Comfort:** Automatically and continuously adjusts the dehumidification capacity of any air conditioning system.
- **Good Value:** Costs less to install than a furnace for better comfort and space savings.
- **Dependable:** Has no burner or vent system to maintain.
- **Multi-Positional:** Can mount in any direction—up, down, or horizontal. Return air can be installed on left, right, or bottom of the unit.
- **Coil pre-heat** to help prevent cold air blowing at start up.
- **High efficiency EC motor** for significant electrical savings.

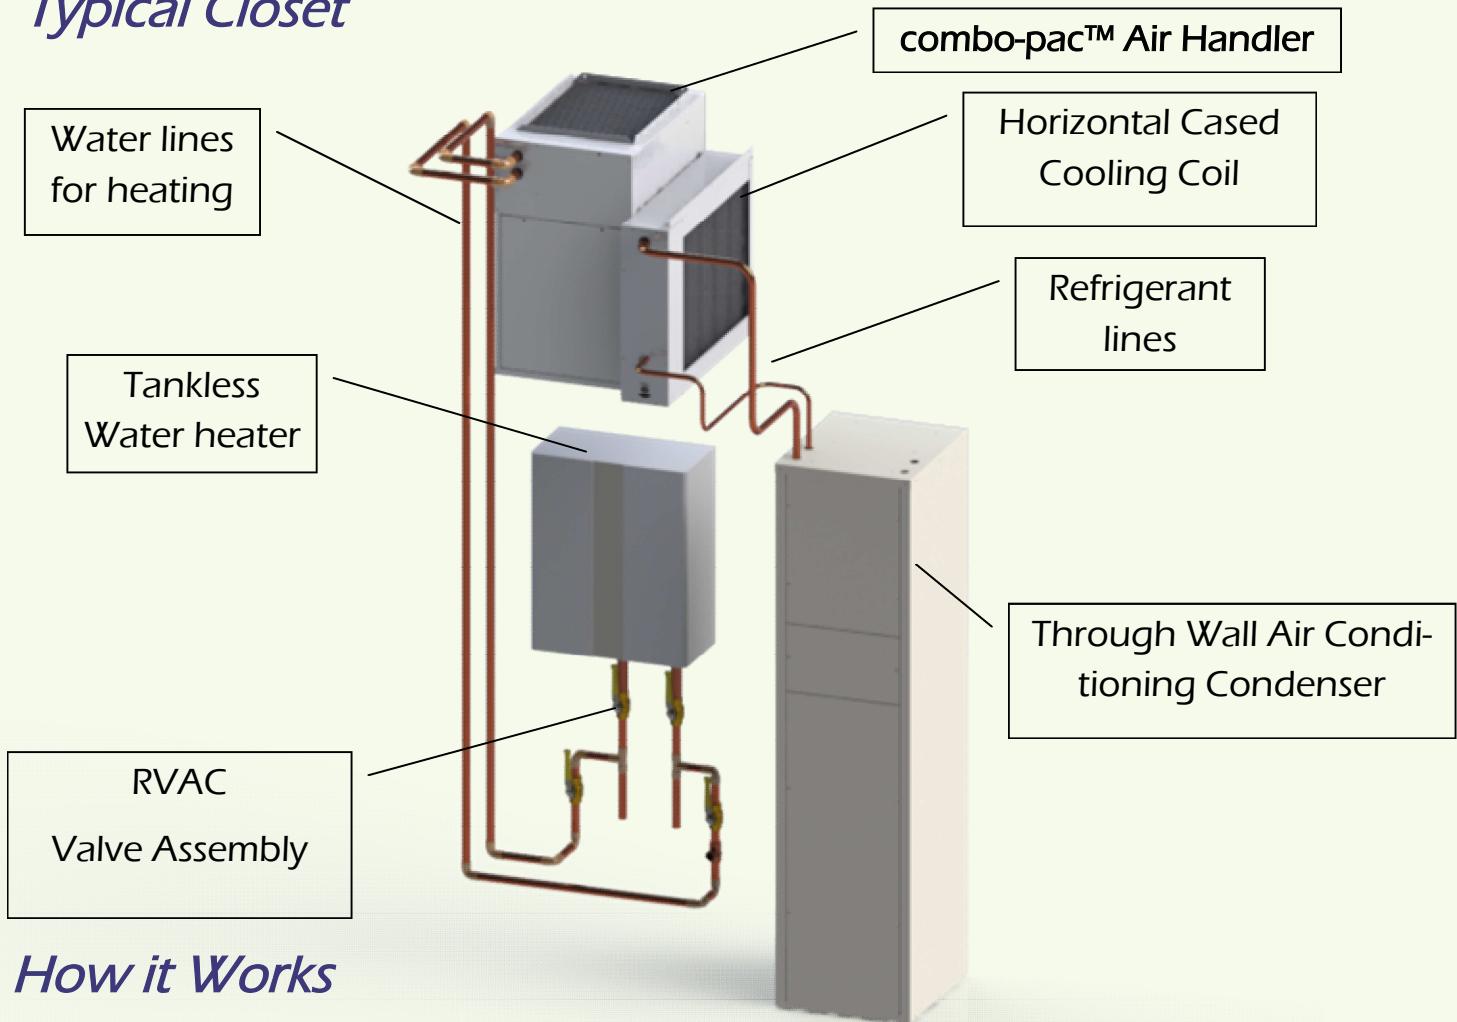

What is it?

The combo-pac™ Air Handler is a multi-speed high efficiency unit that is used for forced air heating and cooling. It can use a boiler, domestic tank-type, or tankless water heater as the heat source. The combo-pac™ programmable controller allows for feature customization for each home as well as status display and error code diagnostics.

combo-pac™ Air Handler

Typical Closet

How it Works

The combo-pac™ air handler uses heat from the water heater or boiler for space heating and accommodates conventional air conditioning for summer cooling. The compact size of the smaller unit allows for closet installation of all components where space is at a premium. The larger units are used in bigger homes where more capacity is needed. The high efficiency EC motor and programmable controller allows for custom heating, cooling and continuous fan speed settings, giving you both ultimate comfort and great energy savings.
