

## *Benefits*

- ♦ **Quiet Performance:** Engineered and dynamically balanced for quiet operation.
- ♦ **Ultimate Comfort:** Large coil delivers warmer, more comfortable air than typical combo systems, heat pumps and many furnaces.
- ♦ **Good Value:** Costs less to install than a furnace for better comfort and space savings.
- ♦ **Dependable:** Has no burner or vent system to maintain.
- ♦ **Multi-Positional:** Can mount in any direction—up, down, or horizontal. Return air can be installed on left, right, or bottom of the unit.
- ♦ **A total package:** Add air conditioning and air filtration for complete indoor comfort.

## *What is it?*

The Thermal-pac™ Air Handler is used to provide forced air heating and cooling. It can use a boiler, domestic tank-type, or tank-less water heater as the heat source. The Thermal-pac™ uses reliable relay controls to operate the blower and circulator pump and is all contained in an attractive white cabinet.

## Typical Installation

\*The Thermal-pac™ Air Handler can use a boiler, domestic tank-type, or tankless water heater as the heat source

## How it Works

The Thermal-pac™ air handler uses heat from your water heater or boiler for space heating and accommodates conventional air conditioning for summer cooling. The compact size of the smaller unit allows for closet installation of all components where space is at a premium, while the larger unit is ideal for homes that need more capacity.
